EDUCATION

Boston University

May 2024

B.A. in Computer Science | Dean's List: 3 semesters

Boston University

Expected Dec 2027

M.S. Candidate in Computer Science & Artificial Intelligence

EXPERIENCE

Software Engineer, Vigience— Full Time, In-Person

Nov 2025 – Present

- Built Salesforce-SAP integration enabling real-time inventory sync for manufacturing clients including Hitachi and Toshiba, eliminating manual data entry across 10,000+ product SKUs
- Developed Apex backend services and TypeScript Lightning Web Components delivering live SAP data in Salesforce with 75%+ test coverage for production deployment
- Reduced inventory reconciliation time from 8 hours to real-time sync through automated OData/SOAP API integration between S4/HANA and Salesforce

Software Engineer, SkillYah— Full Time, In-Person

May 2024 – Oct 2025

- Built Next.js AI-powered English assessment platform from scratch, delivering 500+ paid tests to Japanese professionals across 5 proficiency levels
- Architected full-stack application integrating OpenAI Whisper for transcription, Levenshtein Distance for reading accuracy and GPT-4o for automated scoring, reducing grading time from 45 minutes to 2 minutes per assessment
- Implemented Stripe payment processing with webhook-driven test provisioning and built custom promotional code system with per-user redemption tracking in Supabase
- Architected dual-portal system with public testing interface and internal admin portal featuring Row-Level Security policies for grader workflows and user management
- Designed defense-in-depth access control with middleware authentication, token validation, expiration enforcement, and IP-based rate limiting (5 requests/hour for diagnostics)

Software Engineering Intern, Boston University FORGE – Remote

July 2023 – August 2023

- Built React frontend components with Azure SQL Database integration for fleet inventory management, supporting real-time tracking across 200+ vehicles
- Optimized database queries reducing dashboard load times by 40% through indexed lookups and query result caching

Software Engineering Intern, GBCS Group – Remote

April 2023 – July 2023

- Built React frontend components with Azure SQL Database integration for fleet inventory management, supporting real-time tracking across 200+ vehicles
- Optimized database queries reducing dashboard load times by 40% through indexed lookups and query result caching

RELEVANT PROJECTS

Job Board, [LINK](#)

- Built a full-stack job board ingesting 100,000+ job listings via XML feeds, implementing a SAX-based streaming parser to handle large payloads efficiently without memory overhead
- Engineered fast search and pagination using MongoDB Atlas Search (Lucene-backed full-text)
- Automated weekly data pipelines via GitHub Actions cron jobs to keep listings fresh, ensuring consistent data integrity across the full ingestion-to-search lifecycle

SKILLS & CERTIFICATIONS

Strong: React, JavaScript, Python, Supabase, Firebase

Experienced: Next.js, TypeScript, Docker, SQL, MongoDB, Redis, FastAPI, Flask, Java, Go
